Form: TH- 03 3/31/00

Final Regulation Agency Background Document

Agency Name:	20
VAC Chapter Number:	131
Regulation Title:	Regulations Establishing Standards for Accrediting Public Schools in Virginia
Action Title:	Final regulatory action
Date:	8/10/00

Please refer to the Administrative Process Act (§ 9-6.14:9.1 *et seq.* of the *Code of Virginia*), Executive Order Twenty-Five (98), Executive Order Fifty-Eight (99), and the *Virginia Register Form,Style and Procedure Manual* for more information and other materials required to be submitted in the final regulatory action package.

Summary

Please provide a brief summary of the new regulation, amendments to an existing regulation, or the regulation being repealed. There is no need to state each provision or amendment; instead give a summary of the regulatory action. If applicable, generally describe the existing regulation. Do not restate the regulation or the purpose and intent of the regulation in the summary. Rather, alert the reader to all substantive matters or changes contained in the proposed new regulation, amendments to an existing regulation, or the regulation being repealed. Please briefly and generally summarize any substantive changes made since the proposed action was published.

Section 22.1-19 of the <u>Code of Virginia</u> requires that the Board of Education "... provide for the accreditation of public elementary, middle, and high schools in accordance with standards prescribed by it." Further, the <u>Standards of Quality for Public Schools in Virginia</u> (SOQ), in ? 22.1-253.13:3.F of the <u>Code of Virginia</u>, require that local school boards "... maintain schools which meet the standards of accreditation prescribed by the Board of Education." The standards also require the Board of Education to approve criteria for determining and recognizing educational performance in the Commonwealth's public school divisions and individual schools and that such criteria become an integral part of the accreditation process. The current standards were adopted in September 1997. The Board introduced proposed revisions to the accrediting standards in October 1999 and an additional proposal for revisions in April 2000.

The Board held an initial series of six statewide public hearings on the standards in May 1999. Another set of five hearings was held in November 1999 during a public comment period from November 1999 through April 2000. Another period of public comment was held from June to July 2000. In written and oral statements during the hearings and comment periods, the public and local school officials voiced

agreement with the premise that schools and students should be held to rigorous standards; however, most speakers disagreed with the premise of evaluating schools solely on the basis of test scores. In addition, many of the speakers at the hearings raised the question of what the Board was going to do to help schools that have difficulty meeting the standards. Therefore, the latest revisions of the standards reaffirm the Board's desire for improved academic achievement and performance-based evaluation of schools but offers fairness and flexibility for students and schools.

Form: TH-03

The goals of the proposed revisions considered by the Board in July 2000 were: 1) To reaffirm the Board's commitment to Virginia's academic standards; 2) To identify and target for early intervention and intensive assistance those schools that need the most help and attention so that remedial action can be undertaken immediately; 3) To provide flexibility for schools that achieve or fail to achieve the standards, and in a constructive way, to recognize schools that have made major strides yet have not met the standards; and 4)To encourage Virginia students and public schools to exceed the current minimum standards. These revisions do not lower a single standard or extend the timetable for reaching the standards.

At its meeting on July 28, 2000 the Board adopted revised standards. It is anticipated that the standards will take effect at the end of September for immediate implementation. Most of the standards adopted by the Board in 1997 have been retained, although many sections were rewritten or re-sequenced for clarity to define the Board's continued desire to adopt standards that will improve school performance, provide measurable objectives for student performance, assist low-performing schools, and reward high performing schools.

Statement of Final Agency Action

Form: TH-03

Please provide a statement of the final action taken by the agency: including the date the action was taken, the name of the agency taking the action, and the title of the regulation.

The Board of Education adopted final *Regulations Establishing Standards for Accrediting Public Schools in Virginia* (8 VAC 20-131 et.seq.) on July 28, 2000.

Basis

Please identify the state and/or federal source of legal authority to promulgate the regulation. The discussion of this statutory authority should: 1) describe its scope and the extent to which it is mandatory or discretionary; and 2) include a brief statement relating the content of the statutory authority to the specific regulation. In addition, where applicable, please describe the extent to which proposed changes exceed federal minimum requirements. Full citations of legal authority and, if available, web site addresses for locating the text of the cited authority, shall be provided. If the final text differs from that of the proposed, please state that the Office of the Attorney General has certified that the agency has the statutory authority to promulgate the final regulation and that it comports with applicable state and/or federal law.

Section 22.1-19 of the <u>Code of Virginia</u> requires that the Board of Education "... provide for the accreditation of public elementary, middle, and high schools in accordance with standards prescribed by it." Further, the <u>Standards of Quality for Public Schools in Virginia</u> (SOQ), in Section 22.1-253.13:3.F of the <u>Code of Virginia</u>, requires that local school boards "... maintain schools which meet the standards of accreditation prescribed by the Board of Education."

Purpose

Please provide a statement explaining the need for the new or amended regulation. This statement must include the rationale or justification of the final regulatory action and detail the specific reasons it is essential to protect the health, safety or welfare of citizens. A statement of a general nature is not acceptable, particular rationales must be explicitly discussed. Please include a discussion of the goals of the proposal and the problems the proposal is intended to solve.

These proposed revisions to the *Regulations Establishing Standards for Accrediting Standards for Accrediting Schools in Virginia* refine the requirements related to accountability at the student level, student recognition, and public school accreditation.

The <u>Code of Virginia</u>, in Section 22.1-19, requires the Board of Education to accredit public elementary, middle and secondary schools in accordance with standards prescribed by it. In addition, Section 22.1-253.13:3 (B) of the <u>Code</u>, the Standards of Quality (SOQ), requires the Board to promulgate regulations establishing standards for accreditation pursuant to the Administrative Process Act. Finally, the SOQ

requires the Superintendent of Public Instruction to develop, and the Board of Education to approve, criteria for determining and recognizing educational performance in the Commonwealth? s public school divisions and schools and that such criteria become an integral part of the accreditation process.

Form: TH-03

The <u>Regulations Establishing Standards for Accrediting Public Schools in Virginia</u> ("regulations" or "standards"), adopted in September 1997, govern the purpose, philosophy, goals and objectives; academic achievement; requirements for graduation; school accountability; school leadership; staffing and support services; facilities and student safety; school communication; and procedures for accreditation.

The requirements have been revised to clarify the requirements of the standards and to help schools continue to focus attention and place emphasis on student academic performance. In addition, the regulations have been revised to refine: 1) student-level consequences related to the testing program and the impact of such changes on a school's overall accreditation rating; 2) the new accreditation ratings; and 3) language inconsistencies in the current regulations.

The Board of Education's annual retreat in April 1999 focused on consequences and rewards as a part of education reform in the country. Educators from around the country with expertise in high-stakes school accountability met with the Board to discuss their experience with low-performing schools and targeted assistance to those schools. In addition, the Board held a series of public hearings across the state in May 1999 to garner public input prior to revising the standards. Subsequent meetings were held with division superintendents and principals to gather input for potential revisions that would clarify the accountability requirements for students and schools. During January and February 2000, the Board continued to receive comments on the proposal. In response to the public comment received, additional revisions have been made to the proposed regulation while maintaining the integrity of the standards.

Substance

Please identify and explain the new substantive provisions, the substantive changes to existing sections, or both where appropriate. Please note that a more detailed discussion is required under the statement of the regulatory action's detail.

These regulations form the basis for the day-to-day operation of the educational program in each public school in Virginia. The regulations contain provisions to govern philosophy, goals and objectives; academic achievement; school accountability; building and student safety and instructional support services; school leadership; involving and reporting to parents; and procedures for accreditation. The regulations were revised to: 1) identify and target for early intervention and intensive assistance those schools that need the most help and attention, so that remedial action can be undertaken immediately; 2) to define consequences and rewards for schools that achieve, or fail to achieve, the standards, in a constructive way that recognizes schools that have made major strides, yet have not met the standards, and to recognize and reward schools that have exceeded the standards; 3) to provide flexibility for schools that achieve, or fail to achieve, the standards, and in a constructive way to recognize schools that have made major strides, yet have not met the standards; 4) to encourage Virginia students and schools to exceed the current standards; 5) to introduce a remediation recovery program; 6) to introduce a new Modified Standard Diploma; and 7) to allow additional tests for student use to earn verified credit.

Issues

Please provide a statement identifying the issues associated with the final regulatory action. The term "issues" means: 1) the advantages and disadvantages to the public of implementing the new provisions; 2) the advantages and disadvantages to the agency or the Commonwealth; and 3) other pertinent matters of interest to the regulated community, government officials, and the public. If there are no disadvantages to the public or the Commonwealth, please include a sentence to that effect.

Form: TH-03

The regulations continue to require that the accreditation status of schools be determined primarily on the basis of student academic performance. Students' performance will be measured using the statewide Standards of Learning (SOL) assessment program, additional tests that are administered on a national or international basis, and, beginning in 2001-02, the performance of students with disabilities on alternate assessments. Local school boards, principals and superintendents will continue to certify compliance with pre-accreditation eligibility requirements in the following areas: staffing; instructional programs; school facilities and safety; school and community communications; and instructional support services requirements. The advantages to the public in the revision of the standards are that the consequences and rewards to schools are more clearly delineated. There are no identified disadvantages to the public with these revisions.

Statement of Changes Made Since the Proposed Stage

Please highlight any changes, other than strictly editorial changes, made to the text of the proposed regulation since its publication.

As a result of a review of public comment and the Board's continued desire to improve the academic performance of students and schools, the Board has adopted the following major revisions to the standards:

- 1. A mechanism was established to allow tests such as Advanced Placement (AP) and International Baccalaureate (IB) to be used with Standards of Learning (SOL) tests for earning verified credits for high school graduation at a student's option. Results on these tests also would count in the school's pass rates for accreditation purposes.
- 2. A transition period from 2000-01 through 2002-03 (students in grades 7, 8, and 9 in fall 2000) during which they will have to pass six SOL tests to graduate: two in English and four of their choosing. This flexibility is being allowed since these students have not had the benefit of the Standards of Learning for their entire school careers.
- 3. A new diploma, the Modified Standard Diploma, was created for certain students with disabilities who are unlikely to meet the requirements for a Standard Diploma but may achieve above the level of the Special Diploma.
- 4. A student-selected SOL test for earning a verified unit of credit may include computer science, technology, or other subjects prescribed by the Board of Education was introduced to provide an alternative to having only academic courses used for this purpose. In addition, students may earn verified credits for elective courses identified by the Board as directed by the General Assembly.

5. A student may have an opportunity for expedited retest on SOL end-of-course examinations.

6. A school may institute a remediation recovery program that has been established by the Board in English (Reading, Literature, and Research) and mathematics to allow a student who is retained in grade and who has not previously passed the related SOL test(s) to receive additional instruction and to retake the SOL test(s).

- 7. Students in grades K-8 may participate in a remediation recovery program for English (Reading, Literature, and Research), mathematics, or both. In grades 9-12, the remediation recovery program includes opportunities to retake the end-of-course SOL mathematics tests and the eighth-grade English (Reading, Literature, and Research) and mathematics SOL tests. Schools receive "bonus points" for their pass rates when students are successful in this program.
- 8. The six standard units of credit, that a student must earn in elective courses for a Standard Diploma must include at least two sequential electives.
- 9. A student will be able to demonstrate mastery of the academic content of a course and receive the recommendation of the school division superintendent to receive a standard of unit of credit and be permitted to sit for the related SOL test to earn a verified unit of credit, without 140 clock hours of instruction.
- 10. New diploma seals to recognize outstanding student achievement in response to mandates of the General Assembly were created:
 - a. The *Board of Education Career and Technical Seal* would be awarded to students who demonstrate outstanding achievement in academic and career and technical studies.
 - b. The *Seal of Advanced Mathematics and Technology* will be awarded to students who demonstrate outstanding achievement in mathematics and technology.
- 12. A series of intermediate annual benchmarks for SOL test pass rates in the four core academic areas of English, math, science and history/social studies between 2000-01 and the end of the 2003-04 academic year that clearly define the expected progress of schools were established. These benchmarks would increase each year in a "stairstep" approach (see chart in attachment). Schools that have student pass rates at or above these annual benchmarks will be "Provisionally Accredited."
- 13. A new accreditation sub-category, "Provisionally Accredited/Needs Improvement", was created for schools that do not reach the annual benchmarks, but which are within 20 percentage points of the benchmarks for use between now and the end of the 2002-2003 academic year. Schools that are 20 or more percentage points below the annual benchmarks will be "Accredited with Warning in (specified academic area or areas)."
- 14. The third-grade science and history/social science test scores will not be used to calculate accreditation ratings during the period from 2000-01 through 2002-03. The third grade scores may be used by combining them with the fifth-grade science and history/social science scores if they will benefit the school.

15. The pass rate in third- and fifth-grade English required for schools to be rated "Fully Accredited" will be 75 percent beginning in 2003-04.

- 16. Schools that are "Accredited with Warning" in either English or math will be expected to adopt an instructional model or method with a documented track record of success at raising student achievement in reading or math.
- 17. An "Academic Review" of each school that is "Accredited with Warning" will be conducted by an individual or a team supervised by the Department of Education. This academic review will focus on whether the school has aligned its curriculum with the SOL, whether the daily class schedule could be restructured to devote more time to academic areas of weakness, whether student achievement data are being used effectively to target areas of weakness, and whether staff development resources are being used efficiently to improve areas of weakness. This academic review report would become a key document in both the development of the school's improvement plan and later evaluations of the school for remedial actions, should the school fail to achieve accreditation on schedule.
- 18. Each school "Accredited with Warning" must file an annual report with the state detailing its progress in implementing its School Improvement Plan. Together with the report of the baseline academic review, these reports will form a record of the school's improvement efforts that will be important in evaluating the school should the it fail to achieve accreditation by the end of the 2005-2006 academic year.
- 19. Any school that has failed to achieve accreditation under current academic standards by the end of the 2005-2006 academic year will be rated in the category of "Accreditation Denied," as in the current SOA, unless the school meets criteria to be rated "Accreditation Withheld/Improving School"--a new rating established in the revised standards. This designation is for schools that have reached the pass-rate standard in English, have at least a combined 60 percent pass rate in the other academic areas, and have increased their pass rates by at least 25 percentage points since 1998-1999 in the academic areas in which they have fallen short. Schools may retain this designation for up to three years as long as they continue to make progress in the areas short of the 70 percent pass-rate standard.
- 20. Beginning immediately, accreditation will be determined by using a three-year rolling average of student pass rates or the current year's scores, whichever is greater. Additionally, the scores of transfer students and students identified as Limited English Proficient (LEP) will be used in calculating of the accreditation rating of a school if those scores benefit the school.
- 21. Schools that achieve a pass rate above that required for fully accredited status may receive waivers from state regulations.
- 22. The important role of principals in the accountability process is recognized and recommendations are made to give principals the maximum amount of authority necessary to run their schools.
- 23. The standards state explicitly that any student who receives a Virginia high school diploma has a diploma of equal value to all other graduates, regardless of the

accreditation status of his or her school. The accreditation status of the school would not be reported on student transcripts.

Form: TH-03

24. Superintendents must verify in writing by July 1 of each year that the curriculum of his or her school division has incorporated the SOL into each school's curriculum and that the SOL are being taught in the classroom to all test-eligible children.

Public Comment

Please summarize all public comment received during the public comment period and provide the agency response. If no public comment was received, please include a statement indicating that fact.

Summary of the Written Public Comments to the Proposed Revisions October 3, 1999 – April 28, 2000

On October 3, 1999, the Board of Education approved the release of the proposed revisions to the *Regulations Establishing Standards for Accrediting Public Schools in Virginia* (SOA) for public comment. The proposed regulations were published in the <u>Virginia Register</u> on November 22, 1999. On November 30, 1999, the Board held five public hearings to receive public comment concerning the proposed revisions. The proposed SOA affirmed the Board's commitment to high academic standards; established new accreditation ratings; established rewards and incentives for students, teachers, principals, schools, and school divisions; established consequences for low-performing schools; and clarified existing provisions. Of the nearly 700 citizens that attended the hearings, 206 individuals spoke before the Board. Participants stated their support of high standards and addressed positive attributes of the SOA, in addition to voicing their concerns. The Board continued to receive public comment through April 2000. Written comments were submitted through letters, e-mails, and facsimiles.

Subpart B Kindergarten through Eighth Grade

Support for section	Criticism of section	Suggestions for section
	It seems that things are being done backwards. (2)	support and promote any legislation or rulings that would eliminate the SOL test requirement that relates toretention(2)
	I passed all of the tests last year in the 5 th grade but there were a lot of people in my class that did not. Just think how they felt because of a test. (3 - signed by 27 students)	SOL tests should no longer be given to schools to take. (3)
	It makes little sense, on the basis of a single test, to depict as failures those students, teachers, and schools who by other objective measures of quality are clearly successful. (6)	The Board of Education should develop a more refined and complete definition of student achievement as well as new procedures for determining educational quality, using a broad spectrum of measures based on widely accepted strategies for validation. (Some examples given: attendance and retention rates, mastery of advanced topics, fluency in sophisticated workplace skills) (6)
	From what I have heard of the SOL examinations, they are a highly flawed means of testing student achievement. (10) As a student I feel that all of the students in our state wish we wouldn't have to take them	Therefore, they should not serve as a primary indicator of student or school performance. (10) You can tell that a student will pass by looking at their report cards. (11)
The SOL tests are a good way to monitor students' acquisition and comprehension and retention of what they have been taught. These tests are also good indicators of the level of education that is being provided by school systems as well as the individual teachers within. (12)	[SOL]. (11)I do not believe that these tests should be able to justify retaining a student from progressing to a higher grade. (12)	

We support multiple criteria for school accreditation and student accountability. (14)	Revise the student accountability standards to include opportunities for repeat testing, a means to address inconsistent performance indicators and quarterly assessment of the SOL. (14)
what was originally designed to be used as a tool to evaluate how much of the subject matter presented in the classroom is retained by the student, can later become the determining factor in promoting the child to the next grade. (16)	This is not right. What happens when you have a teacher who does not do a good job of presenting the subject matter so the student will remember it? (16)

Subpart C2 Performance of Schools and the Percentage of Students Achieving a

Passing Score on SOL Tests

Support for section	Criticism of section	Suggestions for section
The Board of Education has made great strides with the Standards of Learning. (8)	By setting the passing scores at the high end of the range, the Board of Education has ensured substantial numbers of students and schools will never meet the standards. (6) The effect of denying accreditation based on a set of pass rates does establish school accreditation based solely on one test. (8)	The state needs to allocate adequate financial resources so that each school can provide the programs needed to promote student learning. (6) I sincerely hope that the Board and the organizations on your list can find an acceptable alternative or combination of criteria. (8)
	From what I have heard of the SOL examinations, they are a highly flawed means of testing student achievement. Therefore, they should certainly not serve as the primary indicator of student or school performance. (10) We support multiple criteria for school accreditation and student accountability. (14)	Broaden school accountability standards to recognize other standardized student achievement measures. (14)

	outs due to failure on the assessments as they are now constructed. (21) Develop and provide on a
	comprehensive basis supplementary resources to support the preparation of students with disabilities in the SOL assessment process. (21) There is a Web site
	(www.edutest.com) that charges parents and schools for practice SOL tests. Why would the state not provide such a service at no charge? How does such a firm gain access to such information, and yet parents or schools cannot have privy to this information? (23)
Analogy given – Grading schools and teachers on an average score on a test of a child's progress without regard to influences outside the school, the home, the community served, and the like is similar to evaluating a dentist based on the number of cavities each patient has at age 10, 14, and 18 with no consideration for mitigating circumstances. (26)	
We are making a mistake	Base item analysis on the SOL. Not only does that give the teacher and the school data for improvement, it also gives the receiving teacher an academic picture of the individual student which will enable the teacher to develop a plan for the student based on demonstrated strengths and weaknesses. (31)
We are making a mistake allowing our children to be judged with the SOL. (34)	

Summary of the Comments to the Proposed Revisions June 5, 2000 to July 5, 2000

Form: TH-03

On October 3, 1999, the Board of Education approved the release of the proposed revisions to the *Regulations Establishing Standards for Accrediting Public Schools in Virginia* (SOA) for public comment. The proposed regulations were published in the <u>Virginia Register</u> on November 22, 1999. On November 30, 1999, the Board held five public hearings to receive public comment concerning the proposed revisions. The proposed SOA affirmed the Board's commitment to high academic standards; established new accreditation ratings; established rewards and incentives for students, teachers, principals, schools, and school divisions; established consequences for low-performing schools; and clarified existing provisions. Of the nearly 700 citizens that attended the hearings, 206 individuals spoke before the Board. Participants stated their support of high standards and addressed positive attributes of the SOA, in addition to voicing their concerns. The Board continued to receive public comment through April 2000.

In April 2000, the Board of Education approved the release of a second draft of proposed revisions to the SOA. Along with the release of the second draft, the Board provided a period for which the public would be able to submit written comments based on the changes made in response to the November public hearings and written comments received. During this period, the Board of Education received 114 letters, e-mails, and facsimiles from the groups represented in the table below.

Respondents	Total Number of Comments
Parents	26
Educators	33
School boards	10
School superintendents	8
School financial officers	2
Organizational groups	13
Citizens (others)	22
Total comments submitted	114

Summary of Comments Provided:

The compilation of data from all 114 letters submitted regarding the June 5, 2000 draft of the SOA identifies six areas of the SOA that received a significant amount of remarks.

Topic: The Use of Multiple Criteria in Determining Student Achievement

Related Code Section: 8VAC 20-131-30(C)

SOA Language: The Board may approve other measures or means of assessment to verify student achievement in accordance with guidelines adopted for verified units of credit described in 8 VAC 20-131-110.B. of these regulations.

Form: TH-03

Summary of Comments: The majority of comments focused their attention on the fact that graduation and accreditation are still dependent on some type of standardized test. Of the 23 respondents addressing this issue, 13 respondents commented that the SOA places too much weight on standardized test scores (whether SOL, IB, AP, etc) as the way to evaluate students and schools. Three respondents felt that allowing other measures or means of assessment to be used for earning verified units of credit takes the pressure off schools to make sure the students know the SOL content, and weakens the accountability system. Two respondents supported the SOA language assuming that the SOA language stated above might allow for the demonstration of competency in a structured manner that would not be restricted to pencil and paper.

Topic: The Basic Diploma (New to the June 5, 2000 proposed SOA)

Related Code Section: 8VAC 20-131-50(D)

SOA Language: The Basic Diploma program is intended for certain students at the secondary level who are unlikely to meet the requirements for a Standard Diploma.

Summary of Comments: The majority of comments focus their attention on the fact that the diploma represents a significant retreat from the requirements of the standard diploma and is a step to downgrade the standards. Respondents felt it would be a return to the general track curriculum and would establish a dual system. Of the 22 respondents addressing this issue, 14 respondents provided criticism and eight respondents were supportive of the idea. Ten respondents offered suggestions to enhance this section (i.e. limiting the diploma to special education students only).

Topic: Mandated Recess

Related Code Section: 8VAC 20-131-80(A)

SOA Language: In addition, each school shall provide instruction in art, music, and physical education and health and shall provide students with a daily recess during the regular school year as determined appropriate by the school.

Summary of Comments: Ten respondents provided their input concerning the decision to add this requirement to the second revision of the SOA. Of the 10 respondents, five criticized the regulation, while two provided their support. The focus of the criticism was that the requirement of recess will have consequences, such as an extended school day, inconsistent interpretations, and an effect on other mandated requirements. The suggestions provided endorsement of a more specific definition of recess.

Topic: Verified Units of Credit

Related Code Section: 8VAC 20-131-110(B)

SOA Language: The board may approve multiple criteria including other assessments or measures for the purpose of awarding verified credit. Such criteria may include substitute tests for which the student may earn a verified unit of credit.

Form: TH-03

SOA Language: A local school board is authorized to award to a student a verified unit of credit in a course where such student's performance on a SOL test is inconsistent with other recognized indicators of academic achievement.

Summary of Comments: The respondents addressing the topic of verified units of credit were evenly divided when it came to the idea of allowing alternative methods for obtaining the credit. Some felt that the Board should be commended while others felt that graduating students who do not take the SOL tests will take needed pressure off schools and send a message that the SOL tests do not matter. Two respondents were pleased to see the addition of the language allowing the local school to award to a student verified credit when a student's performance on a SOL test is inconsistent with other indicators. One respondent made the comment that the SOA language referring to alternative measures only refers to the utilization of other standardized test.

Topic: School Accountability

Related Code Section: 8VAC 20-131-280(C)

SOA Language: The awarding of an accreditation rating shall be based on the percentage of students passing SOL tests or approved alternative measures on a trailing three-year average that includes the current year scores and the scores from the two most recent years in each applicable academic area, or the most current year's scores, whichever is higher.

Summary of Comments: Seven respondents address this topic of the SOA, and three of the respondents supported the idea of basing accreditation of a trailing three-year average. One local school board made the suggestion that the Board might consider basing accreditation of elementary schools on student academic growth in the basic tools of learning. Another respondent provided a suggestion that an equivalent, but separate manner to aggregate the SOL, basic diploma tests, and the alternate assessment should be employed as this would add to the criteria for school accreditation and avoid compromising the integrity of the SOL testing program.

Topic: Application of the Standards

Related Code Section: 8VAC 20-131-300(C)

SOA Language: A school will be fully accredited when its eligible students meet the pass rate of 70% in each of the four core academic areas except in the third and fifth grades where effective with academic year 2003-2004 and beyond, the pass rates shall be 75% in English. In addition, the scores of the third grade science and history/social science SOL tests shall not be used in the

calculation of a school's accreditation rating. In schools housing both third and fifth grades, the pass rate in English and mathematics at the third and fifth grades shall be combined.

Form: TH-03

Summary of Comments: Fifteen respondents address this topic. However, only two provided their support. Nine respondents felt that by not counting science and/or history scores in the accreditation of a school (elementary level), a message that these subjects are not important in the primary grades is conveyed. In addition, some respondents felt that a potential de-emphasis on K-3 science instruction will have a negative effect on science SOL scores in later grades. Three respondents commented that combining the test results at grades three and five hides poor performance and does not show true progress being made.

Written Comments:

The following sections of the SOA document were addressed by written comment. As many respondents provided comments on more than one section of the SOA, the numbers in parenthesis in the tables below correspond to the actual document submitted during the written comment period.

Regulation Section:
8 VAC 20-131-30 Student Achievement Expectations
Subpart A (part)

Subpart B (part)

Support for section	Criticism of section	Suggestions for section
	We are moving in the wrong	
	direction when we place less of	
	an emphasis on science. (51)	
	Science deserves to be regarded	
	as important as English and math.	

	ı
We are moving in the wrong	
direction. (52)	
The SOL tests are used as the	
sole determiners of whether	
students are scholastically	
successful and schools are state	
accredited. I believe this	
unyielding reliance on a single	
item for determining high stakes	
outcomes will become the	
program's fatal flaw when	
graduation and accreditation are	
denied. (67)	
Not counting the science scores	
sends the message that science is	
not important in the primary	
grades. The potential de-	
emphasis on K-3 science	
instruction will have a severe	
negative effect on Science SOL	
scores in the fifth grade. (69)	
It takes more than a test score to	
determine whether the high	
standards you have set are being	
met. Such tests should not be	
used as barriers to graduation or	
used as the sole criteria for any	
important educational decision.	
The current SOA and first draft	
revision don't require re-taking	
any K-8 tests in the first place, so	
this adds a re-take requirement	
that didn't exist before. The	
language in this section is	
conflicting when it discusses	
required remediation. (73)	
required remoditations (75)	

Regulation Section:
8 VAC 20-131-30 Student Achievement Expectations
Subpart C

Support for section	Criticism of section	Suggestions for section
The opportunity for the verified credits to be awarded in an alternate method allows for the demonstration of competency in a structured manner that need not be restricted to pencil and paper. (90)	Graduating students without taking the SOL test and permitting alternative measures of assessment takes the pressure off schools to make sure the students know the SOL content. (1)	The Board should consider eliminating the testing requirement for high school students who have met the criteria for a particular subject area. For example, if a student enrolled in chemistry has already passed the Biology and Earth
		Science tests, that student should not be required to sit for the

		chemistry test. (11)
The opportunity for verified	Permitting students to graduate	The Board should include
credits to be awarded in an	without passing the SOL tests and	nationally validated vocational
alternate method such as in	allowing the use of alternative	licensure for one of the math or
computer science, technology,	measures of assessment would	science credits. (98)
and other areas is a positive	negate student accountability and	
revision. (98)	weaken the whole process. (45)	
Although expanded record	Permitting students to graduate	As alternatives to passing scores
keeping will occur to permit	without passing the SOL tests	on end-of-course tests, include
students who choose to substitute	takes the pressure off schools to	Advanced Placement and
approved alternative means of	make sure the students know the	International Baccalaureate
earning verified units of credit in	SOL content and weakens the	examinations. (114)
lieu of using SOL tests, this concept has great merit. (102)	whole process. (46)	
concept has great ment. (102)	The state takes a position that	
	does not permit school districts to	
	substitute end-of-course SOL	
	tests for final exams. I do not	
	think that an SOL test should	
	contribute more than 50% to a	
	student's final exam. (66)	
Support for section	Criticism of section	Suggestions for section
	The SOL tests are used as the	
	sole determiners of whether	
	students are scholastically	
	successful and schools are state	
	accredited. I believe this	
	unyielding reliance on a single	
	item for determining high stakes	
	outcomes will become the	
	program's fatal flaw when	
	graduation and accreditation are	
	denied. (67)	
	Our accountability system is relying too heavily on	
	standardized test scores as the	
	way to evaluate students and	
	schools. (72)	
	Academic performance is too	
	complex to be reduced solely to a	
	number. To have real	
	accountability, one must also	
	consider the work students are	
	actually doing on a day-to-day	
	basis in school. (73)	
	Using one or even several	
	standardized tests to account	
	for a student or a school's	
	achievement is not the path to go.	
	(74)	
	We are relying too heavily on	
	standardized test scores as the way to evaluate students and	
	schools. (75)	
	The SOL "are placing a barrier to	

these students graduation from college." The SOL assume that every student will attend college. (76) High-stakes use of SOL tests for advancement and graduation cannot be the overriding determinant of a child's knowledge and understanding of the subject. A handful of multiple choice questions simply cannot serve that purpose, except perhaps in math. Your proposal to allow other standardized tests to substitute for the SOL tests does not resolve the problems inherent with standardized, primarily multiple-choice tests. (78) Support for section The proposed changes to the SOA do not fix the fundamental problem with our accountability system. The over-reliance on standardized test scores as the way to evaluate students and schools in Virginia is wrong. (79) The SOA relies far too heavily on high stakes tests to determine a student's graduation and a school's accreditation. A one-size-fits-all testing system is inequitable. (80) Graduation and accreditation are still dependent on single criteria standardized tests. Allowing substitute tests like AP and IB exams still makes diploma decisions depend on test scores, allowing those too utweigh all other factors. sequence. (73)		

Regulation Section:

8 VAC 20-131-50 Requirements for Graduation

Subpart D (part) Requirements for the Basic Diploma

Support for section	Criticism of section	Suggestions for section
The basic diploma should go a long way toward reducing high school dropouts. This diploma tract will allow the schools to help these students. (42)	By offering a basic diploma you are allowing schools to maintain the status quo by not improving their curriculum, not hiring qualified teachers, and not demanding each student to be competent in reading, writing, and mathematics. (1)	Should only be used for special education students. (1)
Overall, we support the basic diploma idea. However, This diploma should not become accessible to students for whom it is not intended. The basic diploma program should not dilute math expectations. (63)	This option should not be provided to students with no proven disability. It would prevent them from attaining the minimum SOL standard. (45)	Should only be used for special education students. (45)
We support the Basic Diploma only if the Board limits the diploma option to a targeted population and provides an alternate route for the standard diploma that allows students to receive verified credits for passing an industry, professional, or trade certification exam. (82)	This diploma takes away the incentive for schools to improve the curriculum in alternative programs and hire qualified teachers. It also reduces the requirement for four years of English to three. (46)	Should only be used for special education students. (46)
I am glad to see that the Board has adopted this suggestion, at least for special education students. However I am concerned about the way in which this diploma will be implemented. Special education students must not be "tracked" at an early age. To comply with IDEA, Virginia must continue to allow the IEP team to make decisions regarding students' progress through the school. (87)	I am concerned that all students are not expected to achieve the higher standards and are provided an option for a basic diploma. I am concerned that these students who fail the SOL test in their freshman year will count in our success/failure rate. What is the incentive to do well if they know they have another option? (50)	The determination to identify students should be made earlier than ninth grade. (50)

We appropriate the initiation of the	The Desig Dinlome may dony	A mana ammanuista madification

Basing accreditation on a three- year average pass rate is a positive change. (98) The three-year average allows	I am opposed to the regulation that does not allow the exclusion of "0" scores for purposes of calculating school accreditation ratings. (94) The new categories of test scores	Consider basing accreditation of elementary schools on student academic growth in the basic tools of learning. (114)
adequate time for individual schools to assess curriculum areas needing improvement and to initiate corrective measures. (113)	to be taken into account in evaluating school performance may raise schools' total pass rates, depending on what "manner" is chosen, but accreditation will still depend almost solely on test scores. In addition, the language in the SOA doesn't explain how the number who fail and later pass will count towards accreditation; the SOA will still say accreditation is based on the percentage of test takers who pass, which combines those who pass on the second try with all other passers. If, as has been said, the re-takers will count as test passers (i.e. the numerator), but not as test takers (i.e. the denominator), this will help schools by falsely inflating pass rates. (73)	
We support this part of the SOA document (pass rates). (101)		
document (pass rates). (101)

Support for section	Criticism of section	Suggestions for section
This could allow, and should be used, for delaying or imposing a		
moratorium on testing in a given		
subject pending completion of review and any revisions of the		
SOL for that subject. (73)		

Detail of Changes

Please detail any changes, other than strictly editorial changes, that are being proposed. Please detail new substantive provisions, all substantive changes to existing sections, or both where appropriate. This statement should provide a section-by-section description - or crosswalk - of changes implemented by the proposed regulatory action. Include citations to the specific sections of an existing regulation being amended and explain the consequences of the changes.

See "Statement of Changes Made Since the Proposed Stage" above.

Family Impact Statement

Please provide an analysis of the regulatory action that assesses the impact on the institution of the family and family stability including the extent to which the regulatory action will: 1) strengthen or erode the authority and rights of parents in the education, nurturing, and supervision of their children; 2) encourage or discourage economic self-sufficiency, self-pride, and the assumption of responsibility for oneself, one's spouse, and one's children and/or elderly parents; 3) strengthen or erode the marital commitment; and 4) increase or decrease disposable family income.

Form: TH-03

The primary objectives of the Board of Education in revising the standards were to reaffirm the Board's commitment to the standards adopted in 1997 and to define a system of consequences and rewards for students, professional personnel, schools, and school divisions. Student achievement on SOL tests will continue to be used as the primary basis of evaluating schools. Funding for the staffing levels is provided through state basic aid to support the requirements of the Standards of Quality. Therefore, there is no negative impact on the authority of the family or the family unit. There is positive benefit to families who send their children to public schools that have high academic standards and are accountable to the community for ensuring that the high standards are upheld and, to the greatest extent possible, attained.
