ACS Recommendations for Definitive Care	<b>1. Engage all acute care facilities in the Trauma System.</b>	ACS verification would lead to a more unified system

Topics / Subject	Discussion	Recommendations, Action /follow-up; Responsible person
	<b>a. Provide technical assistance and guidelines for treatment and transfer protocols.</b>	
	<b>b. Promote participation in statewide trauma system performance improvement.</b>	
	2. Place the trauma center designation criteria in administrative rule.	ACS verification would lead to a more unified system
	3. Establish a process for designation of new trauma centers based on need.	Under ACS guidelines / grid
	4. Explore mechanisms used by other states to track patient flow and outcomes for patients treated in out-of-state trauma centers for the documentation in the state trauma registry	All states bordering Virginia participate in ACS verification. Promote better pt. sharing
	5. Consider implementation concurrent site visits for facilities electing both ACS and Virginia trauma center	<p>Dr. Young started with this question and discussion was started, discussed the differences and similarities of the ACS guidelines from the Resource for the Optimal Care of the Trauma Patient ( Orange Book) to the State Trauma Manual. It was proposed that by having the trauma centers in the commonwealth certified by the ACS would then bring us to be compliant to the other recommendations of the ACS Survey.</p>
