MATRIX OF ADVANCED PROGRAMMATIC RECOMMENDATIONS FOR CALENDAR YEAR 2026 (CY26) TAC					
Item #	Ag. BMP	Suggestion to the TAC	TAC Recommendations	DCR Supports	FY2028/2029
1P		Consider options to ease the up-front financial burden for cost-share projects such as partial advance payments or staged reimbursements.			
2P		If a variance request is submitted that includes both structural and agronomic practices, the state cap of \$300k should be maintained on the agronomic portion of the practices. The intention of what was passed by the previous year’s TAC was not to give a participant the ability to exceed \$300k on agronomic practices if a variance request with both agronomic and structural practices was submitted.			
3P		Directly spell out that conversion of agricultural land to utility scale solar is a land use change that does not conform to agronomic production which would void any BMPs under contract requiring the full repayment of any received cost share applied to those fields. The inclusion of planned grazing or “agrivoltaics” in solar contracts would not prevent the repayment of cost share funds unless a signed lease existed for the grazing rights of the solar facility and exceeded the life span of the BMP contract. If BMPs are destroyed during the construction of a solar facility, cost share must be repaid regardless of prior agreements. <i>Deferred in CY25</i>
