Office of Regulatory Management

Economic Review Form

Agency name Virginia Waste Management Board	
Virginia Administrative Code (VAC) Chapter citation(s)	9VAC20-120 (repeal) 9VAC20-121 (new)
VAC Chapter title(s)	Regulated Medical Waste Management Regulations
Action title	Amendment 3
Date this document prepared	August 17, 2022

Cost Benefit Analysis

Table 1a must be completed for all actions. Tables 1b and 1c must be completed for actions (or portions thereof) where the agency is exercising discretion, including those where some of the changes are mandated by state or federal law or regulation. Tables 1b and 1c are not needed if <u>all</u> changes are mandated, and the agency is not exercising any discretion. In that case, enter a statement to that effect.

- Direct Costs & Benefits: Identify all specific, direct economic impacts (costs and/or benefits), anticipated to result from the regulatory change. (A direct impact is one that affects entities regulated by the agency and which directly results from the regulatory change itself, without any intervening steps or effects. For example, the direct impact of a regulatory fee change is the change in costs for these regulated entities.) When describing a particular economic impact, specify which new requirement or change in requirement creates the anticipated economic impact. Keep in mind that this is the proposed change versus the status quo. One bullet has been provided, add additional bullets as needed.
- (2) Quantitative Factors:
 - (a) Enter estimated dollar value of total (overall) direct costs described above.
 - (b) Enter estimated dollar value of total (overall) direct benefits described above.
 - (c) Enter the present value of the direct costs based on the worksheet.
 - (d) Enter the present value of the direct benefits based on the worksheet.
- (3) Benefits-Costs Ratio: Calculate d divided by c OR enter it from the worksheet.
- (4) Net Benefit: Calculate d minus c OR enter it from the worksheet.
- (5) Indirect Costs & Benefits: Identify all specific, indirect economic impacts (costs and/or benefits), anticipated to result from the regulatory change. (An indirect impact is one that results from responses to the regulatory change, but which are not directly required by the regulation. Indirect impacts of a regulatory fee change on regulated entities could include a change in the prices they charge, changes in their operating procedures or employment levels, or decisions to enter or exit the regulated profession or market. Indirect impacts also include responses by other entities that have close economic ties to the regulated entities, such as suppliers or partners.) If there are no indirect costs or benefits, include a specific statement to that effect.

- (6) Information Sources: Describe the sources of information used to determine the benefits and costs, including the source of the Quantitative Factors. If dollar amounts are not available, indicate why they are not.
- (7) Optional: Use this space to add any further information regarding the data provided in this table, including calculations, qualitative assessments, etc.

Table 1a: Costs and Benefits of the Proposed Changes (Primary Option)

(1) Direct Costs	nd Benefits of the Proposed Changes (Primary Option) <u>Costs</u>
& Benefits	
	• Public Universities and Other State Agencies- Public universities and state agencies (e.g. VDACS) with Regulated Medical Waste treatment units are considered particularly affected by the proposed amendments to the regulation. Additionally, there may be minor impacts on VDH, and DCLS as potential generators of RMW. (Please see Attachment A) No other state agencies are known to be particularly impacted by these regulations.
	• RMW generators, transfer stations, and RMW treatment facilities – RMW generators, transfer stations and treatment facilities located in the Commonwealth are considered particularly affected by the proposed amendments to the regulation. There are currently 16 permitted RMW transfer stations and treatment facilities in the Commonwealth. The proposed regulation also affects the universe of RMW generators which includes hospitals, doctor's offices, clinics, and other healthcare facilities as well as veterinary establishments, labs, and research facilities, etc. The Agency does not have an estimate of the number of affected facilities under this category which likely includes a mix of small and large businesses.
	For RMW generators, the proposed regulation includes an additional requirement for the maintenance of shipping papers that may have an on-going administrative cost to maintain records for three years after shipment.
	Additional requirements in the proposed regulation that may have additional cost associated with them include the following:
	Permit New RMW Treatment and Transfer Facilities will apply for a PBR (Facilities with existing PBRs may have to update their current PBR under certain circumstances) (9VAC20-121-40(B) and 9VAC20- 121-300). This process will also include public participation. Requirement for permit renewal every 10 years would be eliminated.

T	
	Estimated Cost of New Requirement: Permit Fee (for new facilities and modifications of existing permitted facilities , Cost of Publication of Notice in Newspaper of General Circulation (for new facilities), Potential cost of additional staff time (or hired consultant) to prepare application, Annual Fee
	 Handling, Operations All RMW must be handled in a manner that maintains the integrity of the packaging at all times. Cart tippers, conveyors, etc. must control movement and impact to maintain integrity of packaging (9VAC20-121-100(F)) RMW Transfer stations or treatment facilities shall maintain and operate in accordance with a regulated medical waste management plan that meets all the requirements of 9VAC20-121-330 (9VAC20-121-230(B)) Each facility shall conduct monthly inspections of all major aspects of the facility and maintain records of inspections onsite (9VAC20-121-230(U)) RMW Transfer stations and treatment facilities shall implement an unauthorized waste control program (9VAC20-121-230(K)) Radiation detection equipment shall be operated and maintained in a manner that ensures that all incoming waste is screened and the measurements are meaningful and fulfill the objectives for detecting radiologically contaminated waste (9VAC20-121-230(L))
	Estimated Cost of New Requirement: Potential retrofits for facilities using cart tippers or slides or conveyors to ensure the movement of RMW is controlled to maintain the integrity of the packaging, potential cost of installation of a fixed radiation detector, if applicable and not already in place voluntarily, potential cost of additional staff time to conduct and document inspections. No additional costs associated with a waste management plan, or unauthorized waste program are expected. These elements were components of existing requirements that will be clarified by the proposed regulation.
	RecordkeepingAll RMW Facilities must maintain records onsite of receipt, shipment or treatment of all RMW for at least three years (9VAC20- 121-100(I)(a) and 9VAC20-121-340)All RMW Facilities shall maintain a RMW management plan in the operating record (9VAC20-121-340(D))All RWM Facilities shall maintain inspection logs (9VAC20-121- 340(K) All RMW Facilities shall keep records of all Unauthorized Waste (9VAC20-121-340(J))

Estimated Cost of New Requirement: Majority of proposed record
keeping requirements clarify or rename already existing
requirements. No additional costs are expected as a result of
proposed recordkeeping requirements.

<u>Treatment</u>

Prior to operation of any treatment unit, the facility must conduct validation testing in accordance with 9VAC20-121-320 and an approved treatment plan to establish the appropriate operating parameters for effective treatment of RMW (9VAC20-121-240(B)(8) and 9VAC20-121-260).

Periodic challenge testing shall be performed under full loading in accordance with 9VAC20-121-270 to evaluate the effectiveness of each treatment unit and method (9VAC20-121-240(B)(9) and 9VAC20-121-270).

Estimated Cost of New Requirement:

Additional cost for validation requirements, including costs for 4 to 12 biological indicators for each of three validation test runs and approximately 8 hours of additional staff time to complete the testing.

Challenge testing includes costs of 0 to 3 additional biological indicators per month beyond the current requirement, depending on the volume of waste treated. The number of biological indicators per month corresponds to the volume of waste treated per load. Staff time for performing challenge tests is not anticipated to be lengthened by the use of additional biological indicators.

Benefits

- **Public Universities and Other State Agencies-** Staff may benefit from increased efficiencies due to clearer and more streamlined regulations.
- RMW generators, transfer stations, and RMW treatment facilities –Amendments to the regulation are intended to benefit RMW generators by streamlining and reorganizing the regulation for ease of use and better understanding of the requirements. Consolidation of generator and management requirements as well as updating requirements to reflect current industry standards will greatly benefit program staff and regulated entities. Specifically, the proposed removal of the following requirements may result in a cost savings to regulated facilities:
 - Removal of requirement to shred treated RMW
 - Flexibility for treatment facilities to establish operating parameters specific to the treatment unit and waste stream

[
			ng to general regulatory performance

	0		ed regulation will better protect human
			ne risk and cost of exposure as a result of
	improperly managed RMW. Cost of Estimated Benefit:		
			s unknown at this time. Potential cost
			proposed regulations include: saved staff
		-	ential civil charges, medical bills from
		-	MW, potential cost of hiring a consultant.
	Based on information from NIH and the International Safety Center, total average medical costs associated with injuries and or illness from improper handling of sharps (31 incidents out of every 100 employees in 2021), as well as medical costs resulting from injuries and or illness associated with exposure to bodily fluids as a result of improper handling in 2021(11 incidents out of every 100 employees) cost approximately \$1,127,573 in 2021. By complying with regulations that are easier to understand and streamlined, it is estimated that employers could potentially benefit from an initial cost savings of approximately \$1,127, 573 in medical fees for injuries and illness associated with improper handling and management of RMW.		
	management of KMW.

(7) Optional		

Impact on Local Partners

- (1) Describe the direct costs and benefits (as defined on page 1) for local partners in terms of real monetary costs and FTEs. Local partners include local or tribal governments, school divisions, or other local or regional authorities, boards, or commissions. If local partners are not affected, include a specific statement to that effect and a brief explanation of the rationale.
- (2) Quantitative Factors:
 - (a) Enter estimated dollar value of total (overall) direct costs described above.
 - (b) Enter estimated dollar value of total (overall) direct benefits described above.
- (3) Indirect Costs & Benefits: Describe any indirect benefits and costs (as defined on page 1) for local partners that are associated with all significant changes. If there are no indirect costs or benefits, include a specific statement to that effect.
- (4) Information Sources: describe the sources of information used to determine the benefits and costs, including the source of the Quantitative Factors. If dollar amounts are not available, indicate why they are not.
- (5) Assistance: Identify the amount and source of assistance provided for compliance in both funding and training or other technical implementation assistance.
- (6) Optional: Use this space to add any further information regarding the data provided in this table, including calculations, qualitative assessments, etc.

Note: If any of the above information was included in Table 1, use the same information here.

Table 2: Impact on Local Partners

(1) Direct Costs	• No localities are known to be particularly impacted by these
& Benefits	regulations. Localities will continue to have a role in local zoning

	decisions regarding the siting of RMW transfer stations and treatment facilities.

(6) Optional	

Economic Impacts on Families

- (1) Describe the direct costs and benefits (as defined on page 1) to a typical family of three (average family size in Virginia according to the U. S. Census) arising from any proposed regulatory changes that would affect the costs of food, energy, housing, transportation, healthcare, and education. If families are not affected, include a specific statement to that effect and a brief explanation of the rationale.
- (2) Quantitative Factors:
 - (a) Enter estimated dollar value of direct costs.
 - (b) Enter estimated dollar value of direct benefits.
- (3) Indirect Costs & Benefits: Describe any indirect costs and benefits (as defined on page 1) to a typical family of three that are most likely to result from the proposed changes.
- (4) Information Sources: describe the sources of information used to determine the benefits and costs, including the source of the Quantitative Factors. If dollar amounts are not available, indicate why not.
- (5) Optional: Use this space to add any further information regarding the data provided in this table, including calculations, qualitative assessments, etc.

Note: If any of the above information was included in Table 1, use the same information here.

Table 3: Impact on Families

(1) Direct Costs & Benefits	• Families will not be particularly impacted by these regulations.

(3) Indirect	
Costs &	
Benefits	
(4) Information Sources	
(5) Optional	

Impacts on Small Businesses

- Describe the direct costs and benefits (as defined on page 1) for small businesses. For purposes of this analysis, "small business" means the same as that term is defined in § 2.2-4007.1. If small businesses are not affected, include a specific statement to that effect and a brief explanation of the rationale.
- (2) Quantitative Factors:
 - (a) Enter estimated dollar value of direct costs.
 - (b) Enter estimated dollar value of direct benefits.
- (3) Indirect Costs & Benefits: Describe the indirect benefits and costs (as defined on page 1) for small businesses that are most likely to result from the proposed changes.
- (4) Alternatives: Add a qualitative discussion of any equally effective alternatives that would make the regulatory burden on small business more equitable compared to other affected business sectors, and how those alternatives were identified.
- (5) Information Sources: describe the sources of information used to determine the benefits and costs, including the source of the Quantitative Factors. If dollar amounts are not available, indicate why not.
- (6) Optional: Use this space to add any further information regarding the data provided in this table, including calculations, qualitative assessments, etc.

Note: If any of the above information was included in Table 1, use the same information here.

Table 4: Impact on Small Businesses

(1) Direct Costs & Benefits	• Small businesses will not be affected by these regulations as the regulations pertain to RMW generators, transfer stations, and treatment facilities.

Changes to Number of Regulatory Requirements

For each individual VAC Chapter amended, repealed, or promulgated by this regulatory action, list (a) the initial requirement count, (b) the count of requirements that this regulatory package is adding, (c) the count of requirements that this regulatory package is reducing, (d) the net change in the number of requirements. This count should be based upon the text as written when this stage was presented for executive branch review. Five rows have been provided, add or delete rows as needed.

Table 5: Total Number of Requirements
