

**MEMORANDUM # 3-99**

**Groundwater Monitoring Frequency** (issued 11/5/99, updated 10/1/01)

The frequency for sampling and analyzing groundwater monitoring points for field parameters is changed from bi-weekly to twice each month, at least 7 days apart.

If the permit's groundwater monitoring plan contains any other frequency, this memorandum does not modify the plan. Any other frequency change(s) must be requested through an appropriate revision application. Form **DMLR-PT-101** was revised to reflect the frequency change.
